# myData

Features of myData

myData is a central register for all asset classes and includes in-built reporting, works tracking and life-cycle costing. The key features are:

- In-built reporting based on regulatory, statutory and industry requirements
- Complete work tracking as per insurance requirements - inspect assets, plan maintenance work, schedule repairs and track work
- Logs and schedules maintenance work based on customer requests
- Reports on asset performance, asset standards and asset condition
- Automated valuations and annual financial reporting based on IFRS and AAS - depreciation method reflects consumption patterns
- Life-cycle costing for all asset types, including critical failure modes
- Budget Analyser - determine future budget allocations
- Produces prioritised capital work programs based on optimisation analysis
- Records and manages risks associated with infrastructure assets
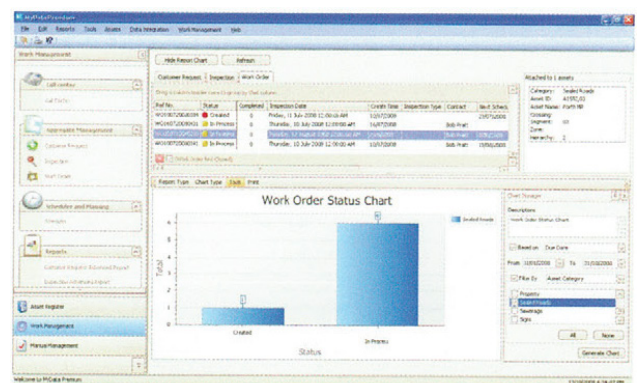

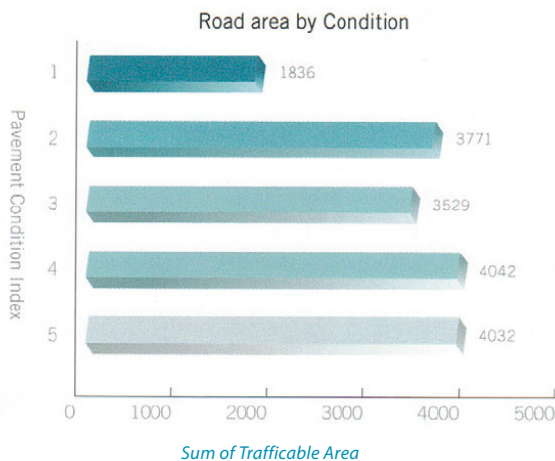

Why choose myData?

- Implementation includes the roll out of a complete asset management framework. Accredited asset management training in asset inspections, condition assessment, maintenance management and asset management plans can be provided
- Supports the requirements of the International Infrastructure Management Manual
